

PSPDictionary

*Version 2.4.0, developed by Germano "Gefa" Fabio
gefasio@gmail.com*

PSPDictionary: What's that?

PSPDictionary is a simple multi-language dictionary for PSP (PlayStation Portable) written in Python, distributed under the GNU General Public License.

It's developed by Germano Fabio, more info on his web site: www.gefa.altervista.org

PSPDictionary allows you to translate a word or a phrase from five language: English, Italiano, French, Deutsche and Spanish.

It's possible to translate remaining offline. In this case, the program supports the translations freely distributed by Wiktionary (<http://wiktionary.org>). There are about 6000 translations for each language.

Besides, it's possible to translate a word/phrase connecting your PSP online, choosing an online translation service. This can be: langtolang (www.langtolang.com), Yahoo! Babel Fish (www.babelfish.yahoo.com) or Google Translate (www.translate.google.com).

How to install PSPDictionary

First of all, I remember you that this program works only on a PSP Far or Slim with a Custom Firmware by DAX.

So, download PSPDictionary from www.gefa.altervista.org

Then, extract the downloaded package, and copy the 'python' folder in the root of your memory stick, and the 'PSPDictionary vX.X.X' folder in the path X:\PSP\GAME

Congratulations, you have successfully installed PSPDictionary.
